

Documentation for Cinema Photoshop Actions

Thank you for purchasing this set of Photoshop actions from PhotographyPla.net!

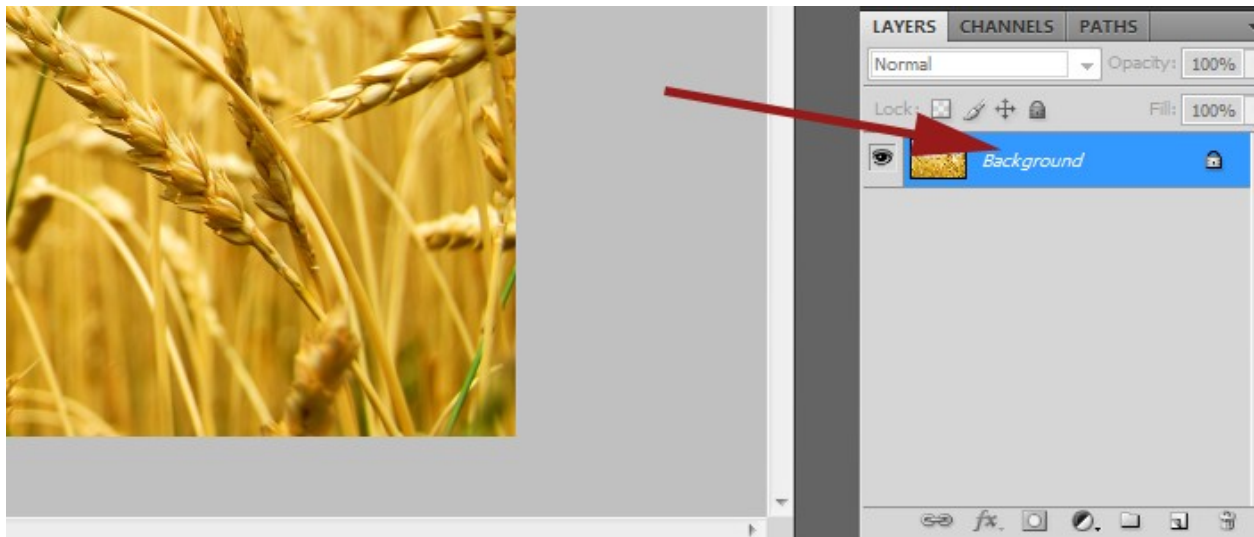

How to install a set of Photoshop actions:

1. Download the action set (you've probably already already completed this step if you're reading this documentation)
2. Unzip the file and save the action set to your hard drive (in a location that you will remember)
3. Open Photoshop
4. Find the action file (.atn file) on your computer and double click it

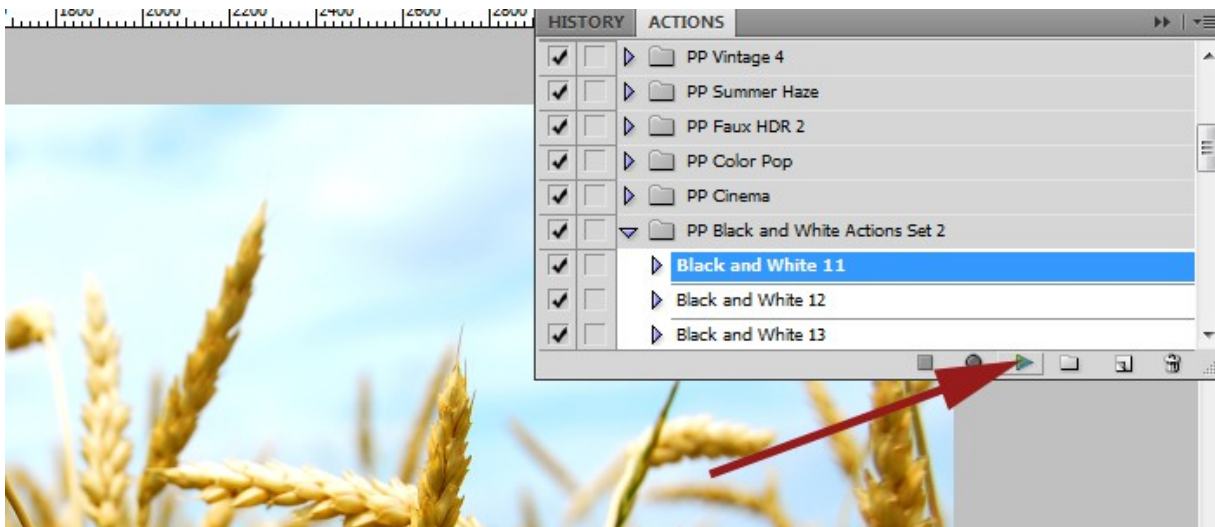

Alternate method for installing actions:

1. Download the action set
2. Unzip the file and save the action set to your hard drive (in a location that you will remember)
3. Open Photoshop and open a photo
4. Click on Window > Actions
5. At the top right of the actions window click on the down arrow, then click on "load actions"
6. Find the .atn file on your computer and click "load"

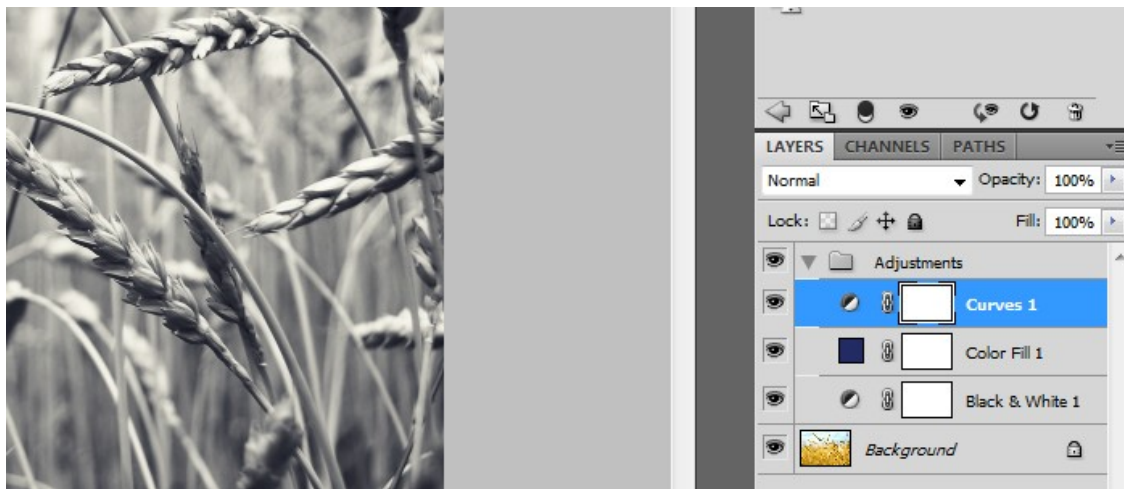

To run the actions, please open the photo that you want to use and make sure that the photo consists of only one layer.

To run the action, select the action that you want to use and click the play button.

After the action runs you will see the layers created by the action in the layers palette.

You can edit these layers and adjustment layers as needed. For example, you can lower the opacity of the Adjustments folder to decrease the intensity of the effect. You can also edit individual layers, such as making an adjustment to the curves layer. You can also hide individual layers if you would like.
